

0:07

thank you [Music]

0:18

I'm going to tell you the scariest true story ever told over thousands of years in thousands of versions with different

0:25

names and my new details but the story always ends the same way with the next

0:30

end of the world will give you the short version first and then the burden of proof will fall

0:36

here to present the evidence across time and topic that the slow crawl of geology

0:41

the wind water fire and tectonic creep is punctuated in rare occasions by

0:47

disastrous upheaval the Earth's magnetic field reverses with dramatic Excursion events sprinkled

0:54

between they can occur in less than 100 years from plunge to Rock Bottom

0:59

Earth's ongoing magnetic event has already been underway 150 years into the

1:04

Red Zone and it is speeding up in early 2019 the magnetic event accelerated to

1:10

where an update to the world magnetic model was required ahead of schedule for the first time well so far this has not

1:18

been causing catastrophic events but unfortunately there are other aspects to the event coming both in physical

1:24

evidence and in the stories told in rock and voice the sun plays the role of the

1:29

Destroyer where the decadal and Centennial cycles of activity converge we find the entire magnetic potential of

1:35

the sun accessible for what can only be described as a micro Nova as unbelievable as that might sound the

1:42

evidence will actually show this to be an almost unavoidable consequence of the Solar System trip through the Galaxy

1:48

there is evidence that the crust and mantle unlock at the low velocity Zone the plates collide and may be worse

1:55

triggering volcanoes and sending unfathomable amounts of water into the land creating surge deposits of bone and

2:02

Earth the earthquakes and volcanoes and tsunamis are followed by snow ice

2:07

incredible amounts Falling by the yard as Earth's temperature plummets we'll see evidence at the micro scale of the

2:14

previous great solar blast the ways in which humans survived the last great catastrophe the evidence that similar

2:20

plans are secretly unfolding beneath our feet and the evidence demonstrating the cover-up and erroneous geological

2:27

science that overthrew a course of rediscovery one that can now lead us to understand that the sun's cyclical

2:33

Passage through the galactic electric sheet is the trigger for the great catastrophe cycle on Earth

2:39

let's begin in the 1700s with a surge of global exploration and Science and the

2:45

discovery of the evidence for these Cycles a dozen researchers became dozens in the 1800s as more evidence and

2:51

excitement and Terror over the implications of the evidence was mounting in an undeniable charge to

2:57

science to explain all the evidence the 1900s saw a further growth of the field

3:02

many researchers gained considerable Fame While others were silenced the end

3:08

of the century saw the birth of the plasma universe connection to catastrophism with the first Global

3:13

study of petroglyphs describing a solar catastrophe in antiquity the story truly begins relevantly

3:20

however with a man almost certainly responsible for the misdirection of the truth Charles hapgood his Earth crust

3:27

displacement Theory became the torch for the catastrophe cycle and when it bombed it took down the entire field with it

3:35

we will demonstrate his motive and opportunity to cheat Einstein that he knew the truth he covered it up a key

3:43

element of that cover-up occurred in the 1960s when a theatrical extravagant and

3:48

shock-driven hollywood-style description of the catastrophe was classified by the CIA that is one mystery why this one

3:56

when so many others had discussed the topic for years for centuries could it

4:01

be that this one contains something unique when it was Declassified and released in

4:07

2016 it was heavily sanitized down to only 57 pages but even those pages

4:12

deliver incredible Bounty and that is where we will begin with just another of the thousands of versions of this story

4:19

one we will show to be partly right and partly wrong in the rest of this video

4:24

but either way which endows upon you the mindset required to take this journey

4:30

with us as dozens of researchers and CIA co-founder Charles hapgood himself put

4:36

out their own versions of the story here is chapter one of the only work on the catastrophe that was classified

4:44

with a rumble so low is to be inaudible growing then fuming into a thundering

4:50

Roar the earthquake starts only it's not like any earthquake in recorded history

4:56

in California the mountains shake like ferns in a breeze the mighty Pacific rears back and piles up into a mountain

5:03

of water more than two miles high then starts its race Eastward

5:08

with the force of a thousand armies the wind attacks within three hours the

5:13

Fantastic wall of water moves across the continent burying the wind ravaged land

5:18

under two miles of seething water coast to coast Central America suffers the same

5:25

candidate South America finds the Andes not high enough to stop the cataclysmic

5:30

violence pounded out by nature in her berserk rage in less than a day Ecuador Peru Western

5:38

Brazil are shaken madly by the devastating earthquake earned by molten

5:43

Earth fire buried under cubic miles of torrential Pacific seas and then turned

5:48

into a frozen hell everything freezes man Beast plant and mud are all rock

5:55

hard in less than four hours Europe cannot escape the onslaught Western Africa and the Sands of the

6:03

Sahara vanish in Nature's wrath the area bounded by the Congo South Africa and

6:09

Kenya suffers only severe earthquakes and wind survivors there Marvel at the sun

6:15

standing still in the sky for nearly half a day as the Arctic Basin leaves its polar

6:21

home Eastern Siberia Manchuria China and Burma are subjected to the same

6:27

Annihilation as South America wind Earth fire inundation and freezing

6:34

the Bay of Bengal Basin just east of India is now at the North Pole the

6:40

Pacific Ocean just west of Peru is at the South Pole Australia is the new

6:45

unexplored continent in the north temperate zone with only a few handfuls of survivors populating its vastness

6:54

the cataclysm has done its work well and drives the pitiful few who survive into

6:59

a new stone age once more the Earth has shifted its shell with the poles moving almost to

7:06

the equator in a fraction of the day again the atmosphere and oceans refusing

7:11

to change Direction with the Earth's shell have wiped out almost all life after this tumble we'll join Noah Adam

7:19

and Eve Atlantis Mew and Olympus

7:25

so that paint's a pretty terrible picture if not for the fact that it was classified by the CIA it might be worth

7:31

ignoring entirely as science fiction and indeed that version is too extreme but

7:37

the evidence does suggest a slightly lesser version of that same event does indeed occur during these upheavals now

7:44

it is our job to show you the evidence from start to finish and these are the points we will need to hit to do so

7:50

first we will have to begin with the cover-up with the manner in which this entire topic of Earth cataclysms went

7:57

from one of the most important in geophysics to Total pseudoscience it was

8:02

one of the greatest cover-ups in history we will then go through the evidence that we have to look to the sun we'll

8:08

see how it is cyclically triggered to Outburst as we look to the sanitized portion of the Adam and Eve story that

8:14

is still technically classified but has been leaked past the threshold of action we'll discover the nature of the solar

8:20

Outburst from the sequence of events and the evidence left on Earth the nature of the catastrophe will look into the pole

8:27

reversal and exactly what it is and what it means for us the impactors and their

8:32

connection to the event and finally survival into the next age of Earth

8:38

it was not until the story by Chan Thomas was put into the public that the science of catastrophism could once

8:45

again progress and that Story begins with the cover-up that really began with the predecessor organization but the CIA

8:51

the office of strategic Services the initial question is why was this version

8:56

of the book classified what makes this version of the story unique well certainly this version of the story is

9:03

quite extreme a one-day shift of geologic proportion that sends the sea from its beds and tears the world apart

9:10

the most critical aspect of the work is the fact that it highlights a repeating cyclical nature to the event on Earth

9:17

then again nearly everyone who studied the catastrophe over the last 300 years

9:22

came to that same conclusion in the 1940s one of the most critical

9:28

scenes of this theater played out at the North Pole major Maynard E White led the first mission to map and understand the

9:35

Arctic region mostly because of navigational concerns and a monitor for Soviet attacks over the pole when it

9:42

became imperative to locate the magnetic pole position the scientists found much more than they bargained for when they

9:48

got their boots on the ground they found evidence of marine strata lifted to significant altitude Time After Time and

9:56

with tropical corals found in that Arctic region strata complementing the evidence of similar fossils found by

10:03

Admiral Byrd in Antarctica both complementing the prehistoric trees Unearthed the Norway which had no rings

10:09

indicating that they resided at the equator all in all major whites team believed that they had Unearthed nine

10:15

levels of catastrophe on the planet these findings were reported at the Pentagon attended also by Paul Sipple of

10:23

the Rand Corporation and presumably members of the office of strategic Services where Charles hapgood was a key

10:29

player in geophysics and working with major White's findings and Dr sipple's

10:34

experiments it was concluded that Earth's magnetic pole began slowly accelerating followed by a whip around

10:40

the geographic polar region which somehow tilts the planet back and forth

10:46

which is why there is evidence of the polar regions in the same places over and over because it always tilts right

10:52

back and appears to have not moved over geologic time they confirmed the catastrophe aspects

10:58

of the new mountain range creation and Ice Age conditions immediately following the great event

11:04

Charles hapgood Paul Sipple and the Pentagon are perhaps the most credible Advocates of this 10 to 12 000 year

11:11

cycle of disaster on Earth especially when you consider what they did next

11:16

hapgood continued his classified life while also teaching at various universities up through the late 60s

11:23

during the 50s in the Years following major White's Arctic Mission Charles hapgood stepped into the Limelight in

11:30

his public life with the famous Earth's crust displacement Theory it was a much

11:35

mutated version from what we heard from Major White where the polls do not go back and forth to the same places the

11:42

cycle is twice as long and instead of a one-day event it takes thousands of years to complete and which was easily

11:48

debunked by modern geophysicists taking down the entire science of catastrophism with it

11:54

that is the famous version with the forward written by Albert Einstein that is not disputed as his work with Hapgood

12:01

was well known in the years before he died however Einstein was likely privy to the same information as Hapgood and

12:08

the final book came out after he died there is no way of knowing if Einstein

12:14

supported the radically different version that Hapgood eventually espoused but what we do know is that Einstein saw

12:21

the cycle of catastrophe and the turning over of the earth he was looking for a way to unlock the crust from the low

12:28

velocity Zone in the years before he died and we know he never did find a sufficient geophysical mechanism

12:35

Hapgood's version of the story the public one does not match what he and Siple delivered to Major White at the

12:42

Pentagon a decade earlier it does not match the geological evidence or the timelines as well as Hapgood's versions

12:48

again were easily debunked now Einstein discussed this for years with

12:54

Hapgood and the only contribution was a forward maybe but armed with that

13:00

forward the weak version of crust displacement Hapgood placed over the field had the credibility to do so

13:07

the Chan Thomas version matches the version that somehow got lost between the Pentagon and Charles Hopkins public

13:14

life and it was in fact classified in the years after Hapgood's work the

13:19

first work to deviate from that flawed story since the flawed story came out it

13:25

plainly contradicts the version that the CIA geophysicist Charles Hapgood was promoting around the world even if he

13:31

had promoted a different one in private and Chan's version got classified as apparently did that real version of the

13:38

story reported from what Major White and Paul Siple provided Einstein's key problem was the evidence of Greenland's

13:45

tilting action but a lack of weight in ice to pull the crust itself nobody had

13:51

ever before discovered a mechanism for how the Earth would actually accomplish this unfathomable disrespect of inertia

13:58

basic physics common logic frankly the explanations blaming the hand of God had

14:04

about as much evidence as anything else up until that point that is until the

14:10

version Chan Thomas tried to put out the post loot of Chan's work was not

14:15

part of the sanitized release by the CIA but it was included in a 1993 version of

14:21

the book the CIA apparently didn't feel the need to classify due to the disrepute of the field of catastrophism

14:27

nobody cares anymore the post loot describes the only potential mechanism for connection of

14:33

all the evidence from beneath our feet out to the sun in recent years the move

14:39

in cosmology to see the galactic magnetic field structure as coherent including the central Taurus and Jet

14:45

model has run through the National Labs and NASA with Incredible success but one

14:51

of the lesser publicized realizations of this fact is the scaled similarity with the solar system and with Earth's

14:58

equatorial eye on emission we see just like the solar system the galaxy has an

15:04

electromagnetic current sheet Rippling around the equator separating the coherent fields of North and South

15:10

now in our solar system the Sheep ripples wavering around the equator bringing a spike in ion density and a

15:17

reversal of the interplanetary magnetic fields at Earth Although our orbit only

15:22

crosses the exact solar equator twice per year the solar electric current sheet hits Earth every two weeks and can

15:29

produce a geomagnetic storm inducing electric currents in the atmosphere and the ground

15:35

Earth is constantly protected by its own magnetic field but in addition to things like solar flares simply and during a

15:42

every two week solar system magnetic reversal and current sheet impact can cause those electromagnetic disruptions

15:49

so what happens when the sun and solar system encounter the galactic version

15:54

its spike in density and its magnetic reversal process let's actually add one

16:01

more element to that puzzle the dust in our own solar system and most we see

16:06

there is a Dusty plane like Saturn's rings density is low from planet formation over time but in the Galaxy

16:13

that is not the case there are dusty remnants of countless Nova and material left over from the Star formation events

16:20

of the Galaxy so the galactic sheet is more ion dense a galactic magnetic

16:25

reversal and a much more Dusty region than we find in our own solar system now

16:30

out of those three it might seem like the galactic magnetic field reversal and the extra ion and electron density are

16:37

the scarier propositions than the dust but in fact it might be the dust that makes the situation so awful to

16:44

understand why we must investigate a phenomenon known as recurrent Nova there are quite a number of these

16:52

recurrent Nova that we do know of here's an interesting picture of one called

16:58

tpix and by the way this first image was the TPX Nova of 1997 and this was the

17:05

tpix Nova of 2011. it just goes boom over and over and over again beautiful

17:12

plasma physics swinging into view with how they how they're pretty sure the

17:17

eruptive character is when it comes to at least this one recurrent Nova

17:23

and so what this is here and this list will be ever expanding these are the

17:28

current recurrent uh recurring Nova in the Milky Way with the exception of the

17:34

one that was just discovered about a week and a half ago uh that was in the large magellanic Cloud I don't know if

17:40

they're going to count that one as being in the Milky Way or or not but take a look over it's the one two three four

17:47

fifth column where it has a bunch of years those are the known Outburst years just take a look at how

17:53

how many times these ones have actually gone boom some of them all of the

17:58

lectures uh that students are hearing right now and some of the best literature reviews on this topic that

18:04

you can find very much conclude one thing on this list it is

18:09

egregiously under inclusive they say that our viewing of the heavens at this

18:15

level is so nascent that they're almost certainly Supernova that we have seen

18:20

that aren't Supernova that we will see them go boom again and they will make this list they believe that there are

18:27

many with hundreds to thousands of year cycles that we simply have not seen go boom even once and when we do we'll have

18:34

no idea it's a recurrent Nova for hundreds to thousands of years more and so

18:39

come to ask what the trigger mechanism is and it is currently thought to be

18:44

close end binaries that is feeding material down onto one of the other stars and basically causes a

18:50

thermonuclear explosion on the surface there is no doubt that some recurrent Nova are binaries feeding material down

18:57

onto their Partners exploding in dramatic fashion but this has implications for stars with Dusty

19:03

encounters on their way through the Galaxy apart from Dusty filaments and gaseous clouds the central current sheet

19:10

is going to have a higher dust density coinciding with the extra energetic particles this is due to the same

19:15

mechanism that allows a static duster to work in your home that electric field is going to contain a surplus of that Dusty

19:22

material and indeed we're learning that the dust content overall may be much

19:27

greater than we realized the same mechanism described for recurrent Nova binaries works on some level for these

19:34

Stellar Dusty encounters except with the current sheet we also have a surplus of electromagnetic particles as well all

19:41

during a galactic magnetic field reversal the proposal for what that could mean for a sun that is known to

19:47

have the ability to produce rare super flare type outbursts already is something close to the stories of our

19:53

our ancestors insisting the sun has a dark side why did this all kick off when they came

19:59

back from the Moon it's because while probably 90 percent

20:05

maybe more of the glass on the Moon is from meteorite impact or from volcanism

20:11

on the moon probably there is unquestionably these classes of

20:17

glasses that are not from volcanoes and that are not from meteorite impacts

20:25

specifically the ones that have aluminum 26 the relative the relativistic temperature required for that would

20:31

require a meteor that to hit the moon big enough such that we would no longer have a moon many astronomers physicists

20:39

have uh proposed hypothesized that at one time

20:45

um there was an immense solar Outburst from the Sun maybe 100

20:50

000 times what it is right now uh Tommy gold uh was was one of the first to

20:57

suggest this uh this hypothesis and um it has been followed up by other people

21:03

so uh many physicists many astronomers believe that uh in the past Millennia

21:10

ago there was an intense solar outburst and uh so I'm going to pursue that one

21:15

that I have been focused on lately has been the anti-diluvian these so-called

21:21

uh biblical flood if you will on average about every 10 000 years

21:28

you can expect a uh a catastrophe to happen for the most

21:34

part the civilization is wiped out that's it's a horrendous catastrophe it wipes

21:40

out in a pre-existing civilization and most of the people on earth

21:46

and so and so we must start anew through Decades of searching the world

21:51

collaborations with amazing observers like John McGovern harat has amassed the most extensive data set of petroglyph

21:58

representation of global solar storms and the most famous of those is the stickman which is not Amazing by itself

22:04

but those dots on each side found around the world from the exact same time periods is indicative of shared

22:11

experience and the plasma formation called a z-pinch seems to fit the description of both the drawings and the

22:16

physics of a solar disaster there's two events happening here when

22:22

the sun knows the heat from that Nova and also cosmic rays we get within eight

22:28

minutes of when the sun knows now remember for for another 17 to 18

<p>the Nova"></p>

22:33

hours that dust shell is still on the way it hasn't hit until an estimate 17 to 18 hours after the Nova

22:41

so the first thing happens is the thes ironically Taurus winds up saying

22:49

the moon turned red well yeah it turned red it just got baked and melted that's the glazing that

22:56

Thomas gold and others had noticed all around the place then the dust shell hits 17 18 hours

23:03

later several assumptions one you can't assume that this dust shell is homogeneous

23:12

evidence we've seen both on the earth and on the moon have the different

23:19

11 16 17 a few others they had different chemical compositions same stuff they

23:26

found in the South Pole and other places on the Earth so when they say it's impacts like

23:33

another media remember these scientists can't think in terms of a son knowing what I'm trying out everybody this is

23:40

not an easy process that happens it's a complicated one it not just

23:45

not just that the Earth's office rotation and the axis keep going it's also kind of the crust of the earth just

23:52

like the oceans are going to start banging up against each other so after the moon gets glazed by and melted by

23:59

the sun's Nova 78 hours later the dust shell comes and puts a fresh new load of dust on top of it I mean that they're

24:07

grasping for straws because they don't know where else or how else to explain it here they get a sample

24:14

matter in their hand and they got a bunch of holes in it a lot of the samples are getting from

24:19

um Antarctica and other places they don't know to try to get the fishing trip look for fission tracks the stuff

24:26

that came back from the Moon and in 69 and through the 70s they were smart

24:32

enough to look for fishing tracks and they found plenty of them big effect all the glass beads almost all the bugs

24:38

believe that I know of had Fusion tracks in it and about five or six different radioactive elements

24:47

that could only have been formed from a stellar Nova you know which you

24:53

have to have relativistic temperatures I don't know what this is uh

24:58

John here at me Houston but I'm gonna pick it up because uh anything that stares after you better

25:05

pick up it's a blast but uh in this sunlight

25:12

it's reflecting Red Green like like a rainbow

25:19

down the first prism on the moon John or something like that

25:25

uh 10 Rock frags a couple of which are one of which is some interesting black

25:31

glass along the sides of it there are other witches covered with black glass and uh

25:37

maybe a little glass beads all over the place here John oh boy that was a one of those factors

25:45

that's all included with the glass

25:51

[Applause]

25:59

hey Tony I just picked up one it uh it said back 15.

26:04

that is uh has a black Matrix bluish black Matrix with a lamp like uh

26:11

either class or uh did it and uh it's right behind the limb here I

26:18

don't know where that's what we're looking for or not okay that sounds good Charlie this seems to be one of the main

26:24

reasons in fact all these missions talk about this they talk about this glass flat on these glass uh debris

26:31

um samples of picking up on the moon which makes me believe that they were out there looking for glass bladders

26:37

they were looking for evidence of solar effects on the moon and I think that the

26:42

Chinese went up there on The Far Side of the Moon to do exactly the same thing

26:48

you do that in West Texas and you get a rattlesnake here you get permanently shattered soil

26:53

how about rolling that one over there no way fighting to gray with a lot

27:00

of that pits in it that they could

27:06

yeah in fact uh Tony uh the whole area there's a lot of this rock there's a lot

27:12

of this rock here these are interesting because they had a glazed surface on top a six four four five five

27:18

sample it was this glazed top on it and then in another part of that sample

27:23

there were all these pellet shots in it I think it's a very very strong evidence

27:29

path that our sun has a micronova event on a very regular period of time

27:36

and that we're seeing these samples on the moon uh as evidence of these events a consistency of reports from around the

27:44

world of catastrophes that are amazingly similar

27:50

but a lot of people thought it's just what people dream up when they have a lot of time or they're Dreaming or

27:55

whatever it's just stuff that people naturally come up with falakovski

28:00

thought it was catastrophes that people witnessed and remembered as very

28:05

different uh what's called the four o'clock Rapids 56 concentric actually it's less than that because these have

28:12

started to undergo rotation uh here's one on the Navajo reservation bronze

28:18

Shield Third Millennium Middle East uh this is a 56 raid from Kazakhstan somebody locked the doors because at

28:24

this point people are gonna start escaping but this is a 56 or 8 Circle axis Mundi from China and these are

28:31

actually drawn as paint brushes nearly access Mundi here the tree coming up in

28:39

the center but anyway the 56 are there in Arizona

28:44

says same thing pick that one up uh this is unfair I picked the penumbra of a dense plasma Focus which also has 56 but

28:51

it's a plasma so we would expect it nice and

28:57

cool but again remember people in the US government

29:03

saw the sun flare up and get the information back from the the moon when

29:09

brought the stuff back they were most the sun does something terrible they

29:16

didn't know when they felt they had no power to change it you see our tools

29:21

have have shown us things that they couldn't have possibly seen 50 and 70 years ago

29:26

uh Dome ceiling Fifth Street Church Seattle this is very close to the

29:31

Forbidden City of China uh ceiling picture these ceiling pictures show up and they generally have 56. this is

29:39

brand new this is the uh uh Grand Atrium in Saudi Arabia which is brand new and

29:46

uh again they they didn't draw it circular but they certainly put uh eight times seven uh

29:52

panels of light around here as well as some structure in the center that's uh

29:58

Neolithic Stone ruins so so there are 56

30:03

Brooklyn filaments in our intense Aurora that happened

30:08

perhaps four Millennia ago and so Thomas gold Bradley Schaefer Anthony

30:15

peratt Robert shock August Dunning Douglas vote myself and literally

30:21

everybody in the Astronomical Society of Japan at very very least can say that the

30:27

Carrington event is probably nowhere near as big as the sun can go the voices from the past supporting this

30:34

argument come from the Maya the Aztec stories in India China pagans stories

30:39

Aboriginal African Polynesian and those in the Middle East many of which are recorded in the Bible during that time

30:46

the tunnels were built during that time the petroglyphs were carved that blamed

30:51

the Sun some of the stories actually survived from the pagans of Ragnarok

30:58

and this is something that I don't think anyone who studies the sun on on

31:05

long-term scales should really um ignore if we're looking to answer the

31:11

question of what can the sun do to the Earth because it's one thing to look

31:17

back at our ancestors and the stories they tell and say you know what you guys did a pretty good

31:23

job inventing geometry philosophy architecture but we're going to just

31:29

take your most important stories and just going to pretend that you guys are crazy and made them up that's that's one

31:36

giant leap especially when they could predict eclipses when somebody wants to build a Lander

31:43

that's going to go onto the moon or it's going to go on to Mars they have to get

31:49

conditions as possible right one of the places they get this stuff is the exileth lab at Central Florida

31:55

we got a bunch of their soils and we have a bunch here but you guys remember we've got a plasma lab

32:01

don't we down in Georgia the very first time he simulated what this solar flash

32:09

would do to the moon to the lunar soil was absolutely incredible

32:15

and then he blasted it this is the equivalent black glass that

32:21

they found on the moon the glazing of some of the rocks that are in there is the exact glazing that was found on the

32:27

moon this required no meteoritic impact it simply required the equivalent of a

32:33

of a massive CME or Nova shell discharge or even what is possible through x-rays

32:41

going through the vacuum what you got on the left there is piece of muscovite mica this was taken

32:48

here on Earth it is only the third ever found

32:53

rare cosmological event they say all of the black stuff around there

32:58

those are normal fission tracks that's real cosmic rays that's what cosmic rays look like when they hit

33:06

but there's this exclusion Zone around what they call the rare cosmological event they know for a fact that it's not

33:13

electrons or positrons and they represent a residually input positive

33:21

charge that didn't discharge outward but it discharged from the center and it

33:26

looks exactly like the cosmic jet that blasts out of a star when it's born it looks like the cosmic jets that you see

33:33

from the center of a galaxy when it eats a star and so how do you get a residual

33:40

positive charge to basically bathe a crystal such that it takes it in and it

33:46

can't discharge it out it's still it's still bathed in the stuff it has to discharge in the center there's actually

33:52

missing atoms in the center now they're not really missing and I I would argue that while not definitive

34:00

um something tremendous from the sun is not

34:05

a terrible first hypothesis the galactic trigger the dust and gas mechanism for

34:11

super flares and recurrent Nova the evidence on the moon the stories of our ancestors the global nature of the

34:17

disaster all point to the Sun as the Destroyer but is it a super flare or a

34:22

micronova and does it really matter to look at this question we will first

34:28

investigate the recent history of magnetic events on Earth starting with the one ongoing now the key element in

34:35

this overall process is one that has already begun to unfold again here and the clock is ticking as we move deeper

34:41

into the shift we know that Earth's magnetic field has begun an acceleration Beyond its normal wander and coincident

34:48

with that is the loss of field strength magnetic reversals as rapid as 80 years have been recorded in the paleomagnetic

34:55

record and we are already more than double that many years into the current shift while moving more slowly than the

35:01

record fast reversals things have begun to intensify the Earth's magnetic field is currently decreasing by approximately

35:08

five percent per decade with the North and South magnetic poles set to meet in the eastern Indian Ocean while the north

35:15

is moving much faster the South has already left the continent of Antarctica the timeline is on the scale of a few

35:22

decades to a hundred years presuming things don't accelerate any further seem

35:27

impossible well these are the current motions and that is not disputed but

35:33

this magnetic meeting point scenario also has interesting coincidences and

35:38

not a one of them is bright and sunny first this region was an incredibly interesting place a few years ago until

35:45

the data disappeared all the information in this video is

35:50

available for verification via the online buoy database maintained by NOAA

35:55

boy in event mode south of Bali for those who monitor the ocean this is a familiar sight the tale of this buoy

36:02

starts with another and begins long before there was such a thing as station 53046

36:08

you will notice the primary areas of coverage from the Solomon Islands East to the kermadec islands and up around a

36:14

Sumatra all locations of powerful earthquakes in the last few years except this central three including 53046 in

36:21

the middle like I said our Story begins with a different buoy 56003 to the right she's had a turbulent

36:28

life as you can see here in October of 2008 they put her down and it was barely a month before the wild readings

36:34

appeared she was immediately taken offline during the time she was down another buoy was put in

36:40

56001 to the left put down about 350 days later in October of 2009. she ran

36:46

fine O3 came back at a much lower sea depth but in the exact same location before jumping back up in 2011.

36:54

station 56001 began deviating in November of 2011 and one must assume it

37:00

was about that time they hatched a plan to add the third buoy to the group 53046 it was a few months later in

37:07

mid-2012 when she began to send back information within a few months the action began short but significant drops

37:14

in the sea depth this channel began reporting rapid sea floor rise and the buoy was taken out of commission by the

37:20

Australian bom clearly it is back but in the exact same place but when you factor in the further

37:25

movement of the last 36 hours more than 100 more meters which is barely visible here at the end of the chart we have

37:31

officially eclipsed the 1200 meter Mark or just about four thousand feet this could be volcanic could be related to

37:38

The Fault destabilization described in many of our previous videos looks like this part of the world is a significant

37:44

place to watch one of the biggest alternative news stories of that time was that a few days

37:49

after this video aired the buoy disappeared and to this day both it and its data are gone

37:56

further complicating the story is that this region forms a geographically small triangle with the strongest magnetic

38:01

point on Earth the South magnetic pole and with the Dragon's Triangle Asia's version of the Bermuda Triangle and

38:08

indeed that new pole position is near where those airplanes disappeared in recent years now since one pole might

38:15

reasonably be expected to emerge on the opposite side of Earth we find that to be here in South America or perhaps just

38:22

offshore forming a geographically small triangle with the weakest magnetic region on Earth the South Atlantic

38:28

anomaly and the Bermuda Triangle where airplanes may have been known to encounter a difficulty or two over time

38:35

so the magnetic poles are on a collision course at a point near the magnetic maximum point of Earth in the Dragon's

38:41

Triangle with the other side of the world where the other pole would be happening to sit next to the magnetic

38:47

minimum point of Earth and the Bermuda Triangle this is not your normal polar wander this is a true shift and Earth is

38:55

already down approximately 20 percent in magnetic field strength and decreasing as if all these coincidences Aren't

39:02

Enough there is one more and it is the big one the Bay of Bengal Basin just east of

39:08

India is now at the North Pole the Pacific Ocean just west of Peru is at the South Pole the only version of the

39:15

catastrophe cycle that was classified by the CIA is also the only one that mentions the Indian Ocean and South

39:21

America as being the next polar regions After Earth turns over again Chan

39:27

Thomas's version says that is exactly where the new North and South Poles of Earth will be you might also notice for

39:33

the electromagnetically and geometrically inclined among you that from the new polls to those triangles

39:39

and maximum and minimum magnetism points we are forming 90 degree angles for those who find it difficult to ignore

39:46

facts lining up that was seven including real observation data geomagnetism and

39:51

of sprinkling from the CIA now let's take a step back we have now come to a

39:57

point where a considerable compounding of these pieces into a puzzle is required before moving forward

40:04

the topic of Earth's catastrophe cycle has been well understood for centuries past the point of question to the search

40:11

for a mechanism it was not until the top secret geophysicist Charles hapgood

40:16

parading as professor and author put out a mutated version of the story that the topic itself became taboo for

40:23

respectable scientists and that version easily debunked never match the evidence

40:28

or the conclusions from the internal intelligence community of the day of which hapgood was a part

40:34

Einstein's final problem was not understanding how the crust unlocks from the mantle not whether or not it occurs

40:42

and exactly how you disrupt the entire planet they never looked outside the

40:47

Earth the physical evidence and the stories that have survived point to the Sun and

40:52

so does the mechanism currently believe to work for super flares and recurrent Nova the key element of this process on

40:59

Earth the magnetic reversal has already begun and is accelerating and this

41:05

indicates that we are entering the central Galactic current sheet already and it is clear what that dust ions and

41:11

magnetic field change means for the stars that we see experience them on a much more regular basis it means the

41:17

type of thing that the Geniuses of the past who gave us philosophy geometry and architecture found so crushing that they

41:25

blame gods I decided that a magnetic reversal had an awful lot to do with the

41:33

dinosaur extinction and then the more I researched the more I researched I realized that magnetic

41:39

reversals also as far as I'm concerned trigger ice ages

41:45

and that that they returned and

41:51

actually be able to uh to predict when you have the onset of an ice age of

41:56

course here's the here's the conundrum the conundrum is that you've got to have a very large rapid accumulation of

42:02

glacial ice which requires that the climate be cold enough that that ice

42:07

does not melt to disappear through seasonal melting it at the same time you

42:12

have to increase the amount of evaporation from the open in order to lock this much moisture

42:18

into the air that can precipitate out as snow that ultimately is compressed into glaze lights

42:24

problem is is and see is that it requires Heat so there's the kinds of conundrums that

42:31

we're confronted with when looking at this Generations ago had it a lot easier they

42:37

could imagine that they're thousand years or longer we don't have that luxury anymore

42:43

so what is going to happen to us for that we look back past the current shift

42:48

to the last one the last few actually and few people have cataloged the repeating magnetic disaster in the last

42:54

few decades as well as Douglas vote and Robert Felix although there is some question as to the exact timeline of the

43:02

events there is a series of global disasters that involve major magnetic events on Earth surge deposits from

43:09

inundations of the sea filled with the bones of millions of animals and the deposition thereafter of incredible

43:15

amounts of snow and ice the evidence Paints the scariest possible picture of the near future on Earth Felix and vote

43:23

have done the best job analyzing the last few great geomagnetic events the last one was the Gothenburg event it is

43:30

believed to have occurred between ten thousand and thirteen thousand years ago 40 years after its Discovery there is

43:36

still new evidence being Unearthed mostly leaning towards the latter side of that scale

43:41

the data on the Mono Lake and Lake Bongo events is all over the place and to a

43:47

diligent Observer it actually appears that some of the researchers got those events confused over time especially the

43:53

ones in Antarctica in reality it was almost certainly two events one nearered

43:59

for the twenty four thousand years ago range and another closer to 35 000 years ago the last champ event is probably the

44:07

most well-studied Excursion and it was a tremendous hardship on the biosphere one

44:12

of the worst we know of lastly the Antarctic core from Vostok do show another event in addition to the lake

44:18

event about 35 000 years ago and this one is about sixty thousand years ago

44:23

which does allow us to find one more solid event before the data is mostly lost amid erosion and time and geology

44:30

and so if we consider the lake events at the two boundaries of that time data zone we basically have an event slightly

44:38

less often than once every ten thousand years whether it is an exact cycle or not the 11 to 13 000 year range appears

44:45

to be solid and so about twelve thousand years from the last one and with Earth's magnetic field starting to shift already

44:51

and with only decades to go according to the math less if things accelerate there

44:56

is every reason to believe that the long cycle timing and observable change is happening now are not coincidence or at

45:04

very least you cannot presume it is a coincidence at least not with what's at stake a recent paper in the world's

45:11

number one geophysics Journal highlights This Disaster that Looms on the geological Horizon but it's not

45:17

something that happens hundreds of thousands of years apart we call them excursions magnetic

45:24

excursions which is you know a term that's well integrated in the literature now and it these are very

45:32

short-lived reversals but they're associated with uh

45:37

Minima and field intensity and it's the minimum field intensity that are

45:44

implicated because when you have low field strength you enhance uvr how do

45:51

you go from the Heat and energetic input of the solar blast to an Ice Age the

45:56

answer will ultimately determine whether a solar aspect is a super flare or a micronova

46:03

sometimes admitting you don't know at least your mind is open to look for more

46:09

evidence right now the pressing issue is if I'm right that this next glisberg cycle is

46:15

going to be when the reversal happens I'm going to be like 99 years old and

46:21

some of you are probably not going to make it either in 27 years but it's for the children and grandchildren in The Unborn Generations

46:28

oddly as vastly more energetic as a Nova event would be than a solar flare it may

46:34

bring about more of the cooling effects to our planet to explain the ice ages occurring with

46:40

the magnetic reversals we must actually look to either that nova-like event or

46:45

the tilting of the Earth's crust which vexed Einstein for a solution he never found beneath our feet

46:51

the sun does not bulge in blatant disrespect of physics it has a secret its Cycles always build to Greater

46:59

crescendos and the great solar blast could truly disrupt our entire planet while vote does not advocate for a tilt

47:06

of Earth he does advocate for a reversal of rotation the stories of the sun rising in the

47:12

wrong place the stories of the long night were tribes believed the sun might never rise again the stories of the sun

47:19

standing still in the sky all of those ancient stories from around the world complement those found in the

47:25

rock interestingly either a 90 degree tilt and tilt back and forth as was described

47:31

by Chan Thomas Albert Einstein and major white or the rotation reversal advocated

47:37

by vote both leave evidence of the polls residing in the same positions over millions of years cycle after cycle

47:44

bouncing back to the same places such that if you were to look over long periods of time you might think the pole

47:51

has never moved at all here it is Einstein's hitting a brick wall that actually gives us our best

47:57

chance to know what's happening like Chan Thomas and all who came before him Einstein saw the tilting of the crust

48:04

his problem is that the most likely geophysical actor is Greenland it's

48:09

massive ice weight creates an uneven distribution of mass in the northern hemisphere which due to centrifugal

48:15

force of the planet's rotation wants to spin at the Equator the problem of geophysics which Einstein realized and
48:23

never overcame is that Greenland is unlikely to ever gain quite enough ice Mass to unlock the rocky crust from the
48:30

liquid mantle and Float freely it is that unlocking of the crust that is so critical to the crustal tilt
48:37

possibility Einstein major white the researchers throughout history and Chan
48:42

Thomas are all focusing on what's known as the low velocity Zone a thin barrier
48:47

between the rocky crust and fluid mantle but which acts like plastic due to a
48:53

delicate thermoelectric equilibrium meaning the temperature in electrical activity create the plasticity and the
48:59

friction if that equilibrium were to be disrupted it would allow the crust to float freely
49:05

on the mantle and allow for any number of tilt or plate Collision scenarios to occur
49:11

well how do you disrupt the thermoelectric equilibrium that's creating the low velocity Zone a major
49:17

solar blast such an eruption would immediately change viscosity in the magma due to
49:23

cosmic ray bombardment and also cause temperature changes which would only add to the temperature changes resulting
49:29

from any induced currents that resulted when the shock wave hit Earth's magnetic field those events are indeed globally
49:35

induced and they are electric we may also scale up the two known drivers of
49:41

length of day glitches believe it or not those are real they are usually small glitches self-correcting or spread over
49:48

long periods of time and are either caused by Major solar storms geomagnetic jerks from Earth's core or in the case
49:55

of the longer term variations Earth's long-term magnetic field changes now since the length of day means we are
50:02

talking about rotation speed and crustal motion Atop The mantle it Bears mentioning that in the greatest solar
50:08

storm imaginable which could induce current all the way to Earth's core if we know modern day blast can affect the
50:14

mantle makes for possibly combining the two causes of rotation speed inches in
50:19

the same energetic solar mechanism that would satisfy the ancient stories disrupt the low velocity Zone and unlock
50:26

the crust we are now at the second time we have found ourselves confronting way too many coincidences to ignore
50:33

so is it a micro Nova or a super flare a recent study has confirmed that

50:39

magnetization reversal of an entire body of material can occur simply with the application of an appropriate electric

50:45

field a super flare has the energy to electrically disrupt the entire solar system let alone one piece of one planet

50:53

potentially unlocking the low velocity Zone and the Tilted crust thereafter freezes brand new locations at the poles

51:00

puts ice at the equator to reflect sunlight cool the air release cold fresh

51:06

water melt and fog from the process that would further block out sunlight

51:11

if it is Anova regardless of any crustal or rotation events there would be a Dusty remains in the inner solar system

51:18

and in the atmosphere for weeks months and maybe longer the sun would be dimmed

51:23

as though from a volcanic winter and those volcanoes are part of this event as well if you'll recall adding to the

51:29

freezing in both situations this is what the scientists have studied for centuries this is what they have been

51:36

trying to explain this is what we have coming again to Earth as a new cycle and Novus tempus a new age begins again

Nova

51:44

or super flare you may be able to get there both ways is a little bit difficult to to go back

51:52

and to say well the story is not exactly so we have the phenomena from all places

51:59

from the bottom of the sea with Ash and with nickel which is of meteoric origin

52:05

the terrestrial axis moved and that paleo magnetism process that

52:12

terrestrial axis that magnetic axis possibly like Uncle and other of

52:19

Manchester claim that it the earth stand over

52:25

we know now from observational Professor Donson director of Paris Observatory that

52:31

you know that flares on the Sun May influence the speed of rotation of the

52:38

earth and there were certain changes we generally don't like to know that we are traveling

52:43

on a accidental Planet what will all these

52:48

ancient people say what were all these people trying to remember we must take the words left to us in

52:54

generations of oral histories and written records of observations in the sky as instances of events that were not

53:00

the norm they were so important and unusual but they have come through time as warnings

53:06

left by our brothers and sisters the ancient past these events were not lunar eclipses or earthquakes now in this time

53:13

with our understanding of celestial mechanics atmospheric and geological Sciences we must try to make sense of

53:18

these recorded events and untangle them from worship and prophecy it's time to look at them for what they actually

53:24

provide as a road map of things to come we can ask the question as the Earth stopped rotating for any length of time

53:31

in recorded history and the voices call out to us from the ancient Middle East the Book of Joshua in 1405 BC oh sun

53:40

stands still over gibeon o Moon Over the Valley of ayigeron 10 13 the sun Stood Still and the moon

53:49

stood motionless while the nation took Vengeance on its enemies the event is recorded in the scroll of the upright

53:55

one the sun stood Motionless in the middle of the sky it did not set for a

54:00

full day and those same voices call out to us from ancient Peru also in 1405 BC

54:07

the 40th Inca Cape pack was Pasha Tutti the reformer that started the worship of

54:12

the sun god empty in 1405 there occurred a frightening Darkness quote good

54:18

Customs were forgotten and people were given to all manner of Vice there was no Dawn for 20 hours after a great outcry

54:26

confessions of sins and sacrifices and prayers the Sun finally Rose has the

54:31

world experienced a global cataclysm before and will it happen again and what was

54:37

remembered and how is it described to begin again the voices call out from the ancient

54:42

American Indians and this is the ninth and last sign you will hear a Dwelling Place in the heavens above this Earth

54:48

that shall fall in a great crash that will appear as a blue star very soon

54:54

after this the ceremonies of my people will cease is this cataclysm happen before the

55:00

voices call out from ancient China there were seen fire-breathing dragons leaping into the sky

55:07

they call out from ancient Siberia the Earth was on fire from both Horizons

55:13

and they call again from the ancient past and the voices of the Inca at the antiquatana was a stone cut with

55:21

great Precision to observe and measure the movements of the Sun the name meant that which binds the sun and it makes it

55:28

return at least it disappeared returning the earth into a darkness that had occurred once before

55:34

according to the legends did the Inca Chinese Siberians and the

55:39

rest remember the last micro Nova event in their oral histories

55:44

we need to take these people seriously now let's take a moment for the respect

55:49

of geophysics and things like basic inertia of the Earth's rotation being unimaginably Unstoppable that indeed is

55:57

the current Prison from which Earth's catastrophe cycle must escape the tilting of Earth's crust is restrained

56:04

by the evidence that the poles and the ice existing at the polar regions have done so for millions of years and both

56:10

the tilting crust and votes rotation reversal are battling the force of inertia of our rotation

56:17

the reason that the poles in ice matter is because the entire topic of catastrophe was umbrella under Charles

56:24

hapgood's absurd version where seven degree tilts happen randomly and over a

56:29

thousand years and never tilted back to put the poles in their original positions this concept was easily

56:35

debunked and there went the field of study however the previous versions to

56:40

hapgoods votes rotation change major whites Insider version and the Chan

56:46

Thomas classified version all put the polls in the same places over millions of years furthermore the most highly

56:54

cited work on past poll positions which was used to debunk hapgood's work and

56:59

which was used to crush the field of catastrophes as a whole actually has a correction paper published which was

57:06

cited far far less often and which nobody really remembers but it changed

57:12

the past poll positions from the original publication in some cases to to the point where the original paper had

57:19

them on the opposite side of the planet as wrong as you can be with a polar search another of the well-cited papers

57:25

debunking the polar motion came from a bachelor student at Columbia while in theory a major paper does not require a
57:33
major degree this student worked under the CIA controlled programs at Columbia at the time when it was becoming so
57:40
rampant and overbearing that the local community had begun an uproar this is
57:45
how you control a scientific theory whether we further investigate the problem of the polls in the past or we
57:51
cling to the concepts that don't require them the only reason this topic is considered pseudoscience is because a
57:58
widely mutated version of the story was put out by a CIA agent masquerading as a
58:04
professor and which somehow overthrew the centuries of study and literally the
58:09
world of evidence uh one of the things that you and I've been talking about are the idea of these
58:15
micro Nova events on the sun these periodic cyclical eruptions on many
58:20
Stars based on the kepler-2 satellite data and that as this stuff is sprayed
58:25
out into the universe around our inner solar system and these things could have been blasted out from the Sun and these
58:32
periodic explosions and that could have been deposited on the moon on Earth on Mars uh the fact that they're only about
58:40
12 miles down indicates they're not deep penetrator meteor impacts so it leads me
58:46
now to believe that these magnetic anomalies if not all of them certainly some of them uh could be from solar
58:53
eruptions and this is just solar material that has splattered out and
58:58
these planets have run into and this huge cloud of debris once once the sun releases these Nova events
59:14
it goes along with the solar outbursts at the time which caused a glacial
59:20
melting virtually instantaneously in the ice core records and then sediment
59:27
records but particularly the ice core record we see that we snapped out the end of the left Ice Age virtually
59:33
overnight I mean literally the microstratigraphy is that accurate and
59:39
what happens to you know what could be the cause of coming out of the Ice Age I
59:45
say quickly we're talking incredible temperature increased and based on many
59:50

lines of evidence I've now been accumulating I'm going to Major solar outbursts the major
59:56
solar events I'm now convinced that we have direct evidence on the Giza plateau
1:00:01
of a quote lightning strike unquote which would not be a lightning strike in
1:00:07
the sense of normal thunderstorms that type of thing been spotted probably as indicative of
1:00:15
what was happening at the end of the last ice age and that the Giza Plateau itself was literally hit during the
1:00:23
solar hours but I now am convinced that we have on the plateau direct evidence
1:00:29
of this as we have Elsewhere on Earth and it turns out on the plateau was
1:00:36
found something known as the inventory Stella and this is something I've been
1:00:41
studying in great detail with my colleague Dr Manu shesha day and it
1:00:48
talks about Khufu the supposed builder of the Great Pyramid acknowledging that the Sphinx
1:00:55
was already there and that the Sphinx had been struck by quote lightning and
1:01:00
much more ancient the lightning strike that he speaks of is between the second pyramid
1:01:08
and the thing so the the pyramid with the Capstone if you will there that's still intact and
1:01:16
between that and the thing the back end of the thing so it's a vitrification
1:01:22
everywhere and a big scar going deep into the ground we have major
1:01:27
vitrification because of this quote lightning strike and again I was stressed well beyond anything that you would get
1:01:34
with normal atmospheric you know thunderstorms but interrogation there I'm convinced as we're finding elsewhere
1:01:42
that ties in with these um the phenomena uh and I'll use the term cataclysm at
1:01:48
the end of the last ice age when you have petrification at this level on something like the Giza
1:01:57
Plateau it cannot be a meteorite or a comet or asteroid because that would
1:02:02
have literally destroyed and I thought the mind it wouldn't have The Monuments
1:02:08
left on the inventory Stella it talks about this huge lightning bolt knocking
1:02:14

off part of the back basically of the Sphinx there is a concern for the lower

1:02:20

level L shell magnetic fields the smaller arches instead of the global Fields connecting to the polar regions

1:02:26

in most solar blasts even the worst ones we only see every decade or so now the

1:02:31

magnetosphere of Earth compresses down to those outer L shells but still connects to the polar region in the most

1:02:37

exposed outer zones but in the extreme scenario it could be very different the

1:02:43

modeling of the great solar storm of 1859 for example which lit Telegraph wires on fire and shocked operators came

1:02:50

close to hitting the lowest level L shells and if that were to act actually happen on Earth in a super flare or

1:02:56

micronova then you get the potential for a magnetar type discharge where its own processes are thought to Surge Energy

1:03:02

through its L Shell fields Arc down and literally crack the surface of the star at that point the loss of power grids

1:03:09

might be one of the Lesser concerns as for the electric geology lab results confirmed this action on terrestrial

1:03:16

planets the only question is did it happen before and could it happen again you know you have to bring in new

1:03:23

evidence and it has to adjust your theory because theories are just theories now one of the interesting thing about the Clementine mission is it

1:03:30

took magnetic readings of the entire surface of the Moon and found the largest magnetic anomalies on The Far

1:03:37

Side of the Moon around Von carbon and riemann's craters on the far side which

1:03:44

is exactly where the Chinese just landed a Lander does China know does the U.S government

1:03:50

know all the information shared here is published in major journals with

1:03:55

admittedly a bit of connect the dots as well trying to fill in the gaps of the researchers throughout history with the

1:04:01

tools they didn't have certainly it seems like the CIA had it pegged decades ago at least the fact

1:04:06

that there was a cyclical catastrophe and perhaps as early as major whites project Manuka expedition to the North

1:04:13

Pole it all relates to the all-important question of survival in the catastrophe and the only good news we have to

1:04:20

deliver in this presentation there is evidence of tremendous Retreat

1:04:26

of the populace into caves and tunnels thousands of years ago multiple times actually

1:04:32

these tunnels have been reused countless times over history including during wartime and by Smugglers but their

1:04:38

purpose was once to house the humans who for some reason could not remain at the surface as terrible as this event is we

1:04:46

must remember that we are here today so we have survived countless catastrophes and come out on top of this world we are

1:04:53

survivors our government appears to believe it has what it takes for the country to survive

1:04:59

what may have begun as underground shelter for the military Elites and which may have expanded as the result of

1:05:06

threat of nuclear war in the mid-20th century what exists now is a complex

1:05:11

interconnected underground World far greater in capacity than could ever be

1:05:16

needed by the military one must genuinely begin to ask how many people could fit down there there are many maps

1:05:23

on the internet and lists of deep bunkers and bases but these are just the ones we know about most on these Maps or

1:05:30

even acknowledged publicly there's no telling just how much more exists and

1:05:35

how ready the country really is the US government knows some of this

1:05:40

stuff they know the son does Nova there's no debate about that

1:05:45

the question is is they don't want you guys to know about it if it's no longer a secret there's no point in keeping it

1:05:53

a secret they're desperately looking for any other explanation don't look at the sun

1:05:59

that's it that same sort of luck that will leave survivors worldwide afar from

1:06:05

tsunamis and volcanoes and Ice storms will be the same sort of luck made for people by themselves by being prepared

1:06:12

and getting that Head Start in terms of best chance to prolong your use of these

1:06:18

devices don't rely on batteries find a small solar panel portable with USB

1:06:24

output and get devices that have USB charging capability there's no reason you might not be able to use those

1:06:31

devices for a long time a long time yes then there is the Long

1:06:36

Haul provided we aren't all whisked underground into an unimaginable catacomb beneath us and the greatest

1:06:42

feat of Engineering in history there is no reason you cannot do what your ancestors did you may not live that way

1:06:48

now and you may be dependent on electricity but the fact that we know how they live back then means we have

1:06:54

the tools at our fingertips in the age of information how convenient it would rise before the fall

1:07:01

here is a bit more on the intellectual side of prepping but from a non-tangible perspective a scene from one of the

1:07:07

episodes preceding this infomentary this event would be extreme you can

1:07:14

survive it but the shock and awe to the circuitry inside is real if you've ever

1:07:19

seen someone in legitimate shock you know that that cannot be you if your

1:07:25

children are depending on you this Fortress must be ready

1:07:30

the aspect of mental practice is informational situational awareness is

1:07:35

key and as example I'll use New Mexico where I live good to know where the waterways are especially in a desert

1:07:41

even a small stream nearby can be a bounty if you know about local elevation

1:07:47

that helps too especially in relation to Ocean proximity snow caps or other temperature change between Peak and

1:07:53

Canyon at the same latitude other sites to know and everyone knows Carlsbad Caverns around here so maybe

1:08:00

some others might make your list certainly the mining operation maps of your local area could be good in case

1:08:05

you need to flee Cosmic plasma or into the warmer Rock of the crust and for the

1:08:10

same reason the cavern systems of your area are good things to know as well it is critical that you apply these basic

1:08:16

principles to your own situation for your own awareness to mitigate the

1:08:21

System Shock of the event there is no real way to prepare for what terrified our ancestors what glazed the moon and

1:08:29

which may happen again but you simply don't have time to think about these things at that moment it is as important

1:08:36

to understand them now as it is to stock food water and seeds

1:08:42

so what are the two key aspects to mental prepping here of the non-tangible nature first this event will be shocking

1:08:50

but even knowing what could be coming gives you a heads up on the completely uninformed

1:08:56

strength is key in those moments when courage is the most elusive second some of you will want to bug out

1:09:03

to Safe locations others will want to stay in your castle with all your supplies that decision cannot be made on

1:09:10

the Fly you don't have time to plot a route or figure out if you're staying or going you don't have time to go get

1:09:17

those books at the store you have to have a certain amount of mental prepping done beforehand now true enough if your

1:09:24

part of the world sinks into the sea like Atlantis or a piece of a micro Nova shell lands on your head there isn't

1:09:30

much you're going to do but for the lucky that will be spared across the world most will be petrified a select

1:09:37

few will be prepared we'll know it's coming and will have made decisions beforehand we will have some final

1:09:44

questions to answer here and then I need to summarize the entire story once more with the impetus for awareness and

1:09:50

action on the part of everyone alive and for the generations to come the questions that remain concern the

1:09:58

nature of the blast the stability of Earth's Tilt and rotation and therefore the cause of the Ice Age what I find

1:10:05

most interesting is that if the Sun micronovas every 12 000 years or so it's

1:10:11

super flare production must be on a few thousands of years time scale likely the

1:10:16

how stats cycle of around 2 400 years the Nova clearly triggers the cold due

1:10:21

to blocking out sunlight but the super flare lacks the dust and may not unlock the crust it may be a heating event only

1:10:29

here we find the differences between Dr Robert shock and Douglas vote to be the

1:10:35

most prominent most helpful and most telling Dr shock seems to be describing

1:10:40

the rapid and cataclysmic end of the younger driest Ice Age while vote is

1:10:45

concerned only with how the younger driest cold began shock has also come to focus on the few thousands of year scale

1:10:52

as has Dr Anthony peratt and they may indeed be describing one of the more

1:10:57

recent super flare catastrophes either one and were done at the end of the day

1:11:04

the evidence on the earth the moon and other recurrent Nova in the magnetic

1:11:09

cycle of Earth and in the work of cuvier De Luke hibbons Einstein Thomas and white we see pointing to a more

1:11:16

devastating long-term harmonic of the cycle where the sun stands still in the sky at the axis point where the Earth
1:11:22
turns over and where the sun and Galaxy combine as The Sword and the Hand
1:11:27
striking this violence into the biosphere some basic math tells us that if the
1:11:33
equator spins at 1000 miles an hour and it took even as little as one hour to stop rotation it is still only a
1:11:40
deceleration of 17 miles per hour per minute not the kind of thing that's going to throw you against the wall and
1:11:47
while it would inundate the coastal regions like a massive Global tsunami it would not raise the Pacific two miles
1:11:53
high and something tells me one hour is too fast making the push potentially even less but still there is evidence of
1:12:01
waves taking out entire continents and so the rise and fall of land like Atlantis new and Lemuria must be
1:12:07
considered the last one of these events appears to have been about 12 000 years ago the
1:12:13
magnetic field of Earth has begun to shift and accelerate indicating that the solar system may be entering this
1:12:20
electric current sheet and Galactic magnetic reversal region already if so the current rate of change gives us two
1:12:27
to three generations and that is if it does not speed up anymore a similar
1:12:32
speed up to the 1900s or the first decade of this Century could push us over the edge at any time the sun cannot
1:12:39
hide from the earth its only weakness knowledge is power here in the most obvious form we have all the tools to
1:12:46
remain informed and track the Sun the magnetic field and seismic activity at the low velocity zone of Earth if I may
1:12:54
leave you with two final thoughts first modern science emboldens the position of
1:12:59
Einstein Chan Thomas and major white and second we are better equipped than any
1:13:04
civilization in history it is your choice whether you succumb to fear or disbelief or if you make the time to be
1:13:11
informed and prepared just in case there's more evidence to be uncovered
1:13:17
right beneath our feet in July 2019 they discovered that the Florida shell beds
1:13:22
contained microtektite glass beads of space origin so I decided to go get some
1:13:27
the professors were very kind Michelle beds are beyond anything I would have imagined and they let me take various
1:13:33

samples with me we have shelves from various layers of strata including burn layers and those that are more pristine

1:13:40

We Believe much of the treasure lies in the material packed and preserved inside the larger shelves for which we have

1:13:47

many we will search for the glass feeds in these samples and try to do fission track testing they did it for the lunar

1:13:53

soil but they skipped it with the glass beads on Earth do they have transuranic elements aluminum 26 I want to find out

1:14:08

1:15:22

observers I hope you enjoyed that full length movie and I'd just like to thank Ben for putting that together that is no

1:15:28

easy task you may recognize my voice uh so I'm a frequent contributor on the flying the wall podcast I am a an often

1:15:34

presenter at the observing the frontier and I'm reporting to you live from Pittsburgh Pennsylvania which is

1:15:41

actually the town where Ben and I grew up next door to each other so it's been a very long and interesting uh and

1:15:46

exciting journey together that we've all taken Adam and Eve's Story by Chan

1:15:51

Thomas so we actually in our possession have a copy of this book and if you check out the website suspectsguy.com

1:15:57

you'll be interested to see that there are PDF versions for uh download for

1:16:03

free available to the public for all of you that are watching this video you've done a tremendous thing you have

1:16:09

educated and made yourself aware of probably the biggest and most important

1:16:14

story facing uh our Earth today and that is the pending in catastrophe cycle and

1:16:20

I think we didn't even get a chance to talk really much about Mars there's direct evidence of a major crustal shift

1:16:25

on ours there are these magnetic anomalies that are geometrically perfect matches for some of the famous volcanoes

1:16:32

there but they're not geologic matches Geographic matches they're not in the same place almost as though the

1:16:38

volcanoes and these magnetic anomalies once did line up but after a crustal shift they didn't anymore this really

1:16:45

could have been a six hour documentary there is a lot still to do we're not

1:16:51

going anywhere and a lot of the people that we heard from in this documentary they are on board continuing to do

1:16:58

research committed to do the research many of them are coming to observing the frontier 2020 where a lot of uh the

1:17:04

updates and new information will come out really this is just the beginning of

1:17:09

the story of the end
